

APPLIED SOFT COMPUTING

Spring 2026

Instructor:	Sadamori Kojaku	Time:	Tue & Thur 1:30 PM – 3:00 PM
Email:	skojaku@binghamton.edu	Place:	G22 Engineering Bldg.
Office:	J19 Engineering Bldg.	Credit:	3
Office Hour:	3:00 PM-5:00 PM Mon & Wed	Zoom:	my.skojaku.zoom

Course Pages:

1. Course Website <https://skojaku.github.io/applied-soft-comp>
2. Course Github <http://github.com/skojaku/applied-soft-comp>

Course Materials: All materials are available on the course GitHub repository at <https://github.com/skojaku/applied-soft-comp>. Slides will not be provided prior to the lecture (we don't want to give you a spoiler). Lecture notes are available at <https://skojaku.github.io/applied-soft-comp>.

Office Hours: Mondays 3:00 PM-5:00 PM and Wednesdays 3:00 PM-5:00 PM or by appointment (in person and online)

Main References: Below is a curated list of essential books that will be referenced during the course.

- James, G., Witten, D., Hastie, T., & Tibshirani, R. *An Introduction to Statistical Learning*. Available at <https://www.statlearning.com/>
- Raschka, S., Liu, Y., & Mirjalili, V. *Machine Learning with PyTorch and Scikit-Learn*. Packt Publishing, 2022. Available at BU libraries.
- Bishop, C. M. *Pattern Recognition and Machine Learning*. Springer, 2006. Available at BU libraries.
- Martin, R. C. *Clean Code: A Handbook of Agile Software Craftsmanship*. Prentice Hall, 2008.

Objectives: This course introduces you to the emerging field of computational intelligence, a distinct approach to machine intelligence that diverges from traditional AI. The course encompasses artificial neural networks, evolutionary computing, and probabilistic reasoning. The soft computing approach offers numerous potential applications to nearly any field. The purpose of this course is to introduce the basic concepts briefly, and then to move quickly on to application techniques. We will not assume prior knowledge of the theory, but we will move quickly, so those new to the subject matter will need to study extra hard. Though this is a difficult subject to teach as a 500-level course, and even more so as a 400-level one, I will make every effort to structure the course in a way appropriate to those levels. Each student will be required to develop one significant application as a project during the semester.

Expected Student Learning Outcomes: After completing this course, students will: be able to interpret and evaluate modern soft computing literature, concepts, methodologies, tools, and recent research topics; be able to implement and apply machine learning models, neural networks, and other soft computing techniques using appropriate mathematical/computational means; be able to design and conduct original research using soft computing methods and tools; be able to demonstrate integration of artificial intelligence concepts and practical implementation skills through development of a significant application project.

Prerequisites: I try to manage the course in such a way to make it as open ended as possible. By that I mean that on the one hand I try to make it possible for beginning graduate students and upper level

undergraduates with no background in these areas to do well in the course if they apply themselves. But on the other hand, I try to make it possible for already advanced students to expand their knowledge further. In practical terms, students will ideally come to the class with the following knowledge: 1. Basic competence in applied mathematics, which we will define here as calculus at least through partial derivatives and basic familiarity with concepts of optimization as well as discrete mathematics. 2. Enough computer competence and programming skill to implement their projects on the computer in some form.

Course Outline:

M1: The Data Scientist's Toolkit	01/20 (Week 1)
M1: The Data Scientist's Toolkit (cont)	01/27 (Week 2)
M2: Visualizing Complexity	02/03 (Week 3)
M2: Visualizing Complexity (cont)	02/10 (Week 4)
M3: Agentic Coding	02/17 (Week 5)
M3: Agentic Coding (cont)	02/24 (Week 6)
M4: Deep Learning for Text	03/03 (Week 7)
M4: Deep Learning for Text (cont)	03/10 (Week 8)
M4: Deep Learning for Text (cont)	03/17 (Week 9)
M5: Deep Learning for Images	03/24 (Week 10)
(No Class - Spring Break)	03/28 - 04/06
M5: Deep Learning for Images (cont)	04/07 (Week 11)
M6: Deep Learning for Graphs	04/14 (Week 12)
M6: Deep Learning for Graphs (cont)	04/21 (Week 13)
M7: Representations & Structuralism	04/28 (Week 14)
M7: Representations & Structuralism (cont)	05/05 (Week 15)
Final Exam Week	05/08 - 05/14

Grading Policy:

- *In-class (20%)*: Attendance (5%), In-class quiz (5%), Sprint project (10%).
- *Assignment (20%)*: Coding (5%), Module quiz (5%), LLM quiz challenge (10%).
- *Project (30%)*: Project proposal (10%), Project paper (20%).
- *Final Exam (30%)*.
- *Credits*: 3 credits.
- *Grading*: Normal grading; A through F.

Course structure: “Don’t think! Feeeeeel” is a famous quote by Bruce Lee in the movie *Enter the Dragon*, and this is the guiding philosophy of this course. The primary goal of this course is to **feel** the concepts and tools through pen-and-paper exercises and hands-on coding. The course will first cover practical skills, followed by their theoretical foundations. The course activities include:

- Weekly quiz on Brightspace about the lecture topics in the previous week to review and test your understanding of the concepts and tools.
- Coding assignments on Github Classroom for practicing and equipping you with the skills to analyze data.
- 90-minute “Mini” in-class project: Form a team of 2 to 4 people. A task will be given and you must solve the task and document the work. Randomly-chosen teams will present their work. Submit the work to GitHub with a specified format.

- Short lectures to cover the theoretical aspects.

Module Quiz: You will be given quiz questions on each module. Questions are personalized based on your level of understanding. The format is free-write, and you must complete each quiz by the specific due date for that module.

LLM Quiz Challenge: We switch roles: you become the instructor and an AI tutor becomes the student. You compose quiz questions for the AI tutor and you'll win (pass) when your quiz questions stump the tutor. All questions must be approved by the instructor.

Final Exam: The final exam will be a take-home, open-book format on Brightspace. The exam includes 120 questions in multiple choice and short text formats. You will have 120 minutes to complete the exam once you begin.

Project: *Proposal:* No page limit. You may form a team. Describe your idea and plan, and provide literature review explaining why we should care about your project.

Paper: Include Introduction, Methods, and Results sections. We focus on the process, not the results.

Communications: We use Discord for quicker informal communications, Q&A, team discussions, and other casual conversations. We will send you an invitation link through Brightspace. Feel free to NOT use your full name (e.g., "Jane D.") Announcements will be sent via Brightspace and Discord. Many course-related information will be shared on Discord. So, you will miss a lot of information if you are not on Discord.

Office Hours:

- **Sadamori Kojaku:** 3:00 PM-5:00 PM Mondays and Wednesdays at J19 Engineering Building (in person) or Zoom (<https://binghamton.zoom.us/my/skojaku.zoom>).

Important Dates:

Project Proposal #1	03/09
Project Final Paper #2	05/09
Project Presentation #3	05/06
Final Exam	05/12-05/15

Course Policy:

- **Attendance:** Please inform us if you cannot attend class at least one day in advance by submitting the form at <https://forms.gle/74atpKqHMoMajALf6>. If you fail to notify us in advance, in principle, we do not accept the excuse. Acceptable excuses for missing class include illness or conference travel.
- **Laptop and mobile:** We want to engage in-class activities with you together. Please refrain from using laptops and mobile phones unless instructed.
- **Credit hours:** This course is a 3-credit course, which means that in addition to the scheduled lectures/discussions, students are expected to do at least 6.5 hours of course-related work each week during the semester. This includes things like: completing assigned readings, participating in lab sessions, studying for tests and examinations, preparing written assignments, completing internship or clinical placement requirements, and other tasks that must be completed to earn credit in the course.
- **Generative AI:** Students are encouraged to make use of technology, including generative AI tools, to contribute to their understanding of course materials. Students may use artificial intelligence tools, including generative AI, in this course as learning aids or to help produce assignments. However, students are ultimately accountable for the work they submit. Any content produced by an artificial intelligence

tool must be cited appropriately (e.g., MLA: <https://style.mla.org/citing-generative-ai/>). Students may choose to use generative AI tools as they work through the assignments in this course; this use must be documented. The documentation should include what tool(s) were used, how they were used, and how the results from the AI were incorporated into the submitted work. For assignments without appendix support, include this documentation in a dedicated “AI Usage” section or as inline citations.

- **Data backup:** You have the responsibility of backing up all your data and code. Always back up your code and data. You should at least use Google Drive or Dropbox at the minimum. You can also use cloud services like Google Colaboratory. Ideally, learn version control systems and use <https://github.com>. Loss of data, code, or papers (e.g. due to malfunction of your laptop) is not an acceptable excuse for delayed or missing submission.
- **Graduate Academic Consultants:** Binghamton University’s Graduate Academic Consultants can help you with projects in this course. This is a free service. <https://www.binghamton.edu/grad-school/academic-support/graduate-academic-consultants/>
- **Disabilities:** Every attempt will be made to accommodate qualified students with disabilities (e.g. mental health, learning, chronic health, physical, hearing, vision, neurological, etc.). You must have established your eligibility for support services through Services for Students with Disabilities. Note that services are confidential, may take time to put into place, and are not retroactive. The office is located in the University Union, room 119. Captions and alternate media for print materials may take three or more weeks to get produced. Please contact Disability Services for Students at <https://www.binghamton.edu/ssd/index.html> or 607-777-2686 as soon as possible if accommodations are needed.
- **Bias-based incidents:** Any act of discrimination or harassment based on race, ethnicity, religious affiliation, gender, gender identity, sexual orientation, or disability can be reported at <https://www.binghamton.edu/diversity-equity-inclusion/reportbias.html> or to the Binghamton University Affirmative Action Officer at 607-777-4775. Sexual misconduct and Title IX
- **Sexual misconduct and Title IX:** Title IX and BU’s Sexual Harassment Policy regard any form of sexual harassment as a violation of the standards of conduct required of all persons associated with the institution. If you have experienced sexual misconduct or know someone who has, you can ask support from the University Counseling Center at 607-777-2772 (counseling, advocacy, and advice services). It is also important that you know that Title IX and University policy require me to share any information brought to my attention about potential sexual misconduct with the campus Deputy Title IX Coordinator or BU’s Title IX Coordinator. In that event, those individuals will work to ensure that appropriate measures are taken and resources are made available. Protecting student privacy is of utmost concern, and information will only be shared with those that need to know to ensure the University can respond and assist. Visit <https://www.binghamton.edu/counseling/resources/faculty/assault.html> and <https://www.binghamton.edu/services/title-ix/index.html> to learn more.
- **Mental health issues:** If you have any mental health issues, don’t hesitate to contact BU’s [University Counseling Center](#), which provides free counseling sessions. Also, please contact Disability Services for Students at [Services for Students with Disabilities](#) or 607-777-6893 as soon as possible if accommodations are needed.
- **Academic Integrity:** Academic integrity is fundamental to the mission of our university. All students are expected to uphold the highest standards of academic honesty in their coursework and research. Violations of academic integrity include plagiarism, cheating, unauthorized collaboration, fabrication, and misrepresentation. For full details on the Academic Honesty Code, procedures, and appeals process, please refer to [the Student Academic Honesty Code](#). If you are unsure about what constitutes academic dishonesty in any situation, ask your instructor for clarification.
